

# [ACCESS POINT HAVING A VARIETY OF MOUNTING POSITIONS]

## Abstract of Disclosure

An access point includes a housing, two sliding slots, and two sliding plates detachably installed on the slide slots. One of the sliding slots has two openings for hanging the housing of the access point on hooks positioned on a wall. One of the sliding plates can be inserted into a concave slot on the housing, so that the housing can stand vertically on a flat surface. The housing can also be placed on a flat surface or set on its side.
